PATIENT MEDICAL CHART

CONFIDENTIAL — FOR AUTHORIZED USE ONLY. All names, addresses, member IDs, and clinical facts are fictional and were created for demonstration. This is not a real patient.

1. Patient demographics

Patient name	Helen Park
Date of birth	May 22, 1951
Age at visit	74 years
Sex	Female
MRN	CAR-22014
Address	1200 South Dale Mabry Highway, Tampa, FL 33629
Phone	(813) 555-0171
Emergency contact	Daniel Park (son), (813) 555-0172
Primary care	Dr. Grace Miller, MD, (813) 555-0102
Preferred language	English

2. Insurance

Primary insurance

Payer	Palm Mutual of Florida, Medicare Advantage
Member ID	PMMA190044
Group	PM-MA-09
Prior authorization	Required for carotid stent
Auth telephone	1-800-555-0177

Secondary insurance. None on file.

3. Active problem list

ICD-10	Diagnosis	Onset	Status
I65.21	Occlusion and stenosis of right carotid artery	2026	Active
G45.1	Carotid artery syndrome (hemispheric), right carotid territory	2026	Active
I10	Essential hypertension	2004	Active
E78.5	Hyperlipidemia, unspecified	2008	Active

4. Current medications

Medication	Dose	Frequency	Indication
Aspirin	81 mg	Daily	Antiplatelet, started after the TIA
Atorvastatin	80 mg	Daily	High-intensity statin

Medication	Dose	Frequency	Indication
Amlodipine	5 mg	Daily	Hypertension

5. Allergies

Allergen	Reaction	Severity
No known drug allergies	Not applicable	Not applicable

6. Visit notes — vascular surgery

Visit date: March 6, 2026 | **Attending:** Owen Clarke, MD, FACS | **Type:** New patient consult

Chief complaint. Right hemispheric TIA on January 20, 2026, and a high-grade right carotid stenosis.

History of present illness. Helen Park is a 74-year-old retired librarian. On January 20, 2026 she had forty minutes of left arm weakness and word-finding trouble. The emergency physician diagnosed a right hemispheric TIA. Symptoms resolved completely. There is no residual deficit on today's examination. She has not had a prior stroke. She does not have amaurosis. CTA shows a severe right cervical internal carotid stenosis that is not occluded. She understands stent placement and endarterectomy and prefers a stent. She has no recent myocardial infarction.

Examination.

Blood pressure 138/70 mmHg

Neurologic exam Alert. No arm drift. Speech fluent. No visual field cut. The January 20 deficit has resolved.

Neck Right carotid bruit

Heart Regular, no murmur

Rankin Modified Rankin score 0 today

Assessment and plan.

Ipsilateral symptom: right carotid territory TIA on January 20, 2026, within six months of this March 6, 2026 request. Nondisabling.

CTA February 3, 2026: 82 percent NASCET stenosis of the right cervical internal carotid artery, not occluded.

Plan: transcatheter stent of the right cervical internal carotid artery with a distal embolic protection filter. CPT 37215. Endarterectomy was offered and declined.

Electronically signed: Owen Clarke, MD, FACS — March 6, 2026 at 10:40 AM

7. Diagnostic reports

CTA neck — February 3, 2026

Ordering physician	Grace Miller, MD
Indication	Right hemispheric TIA on January 20, 2026
Measurement	NASCET
Date relative to request	February 3, 2026 is within six months of March 6, 2026

Interpretation. Right cervical internal carotid artery: 82 percent stenosis by NASCET criteria. The artery is patent distal to the plaque and is not occluded. The lesion is extracranial. Left cervical internal carotid artery: 30 percent stenosis by NASCET, not a target. Intracranial circulation has no large-vessel occlusion. Impression: 82 percent NASCET stenosis of the right cervical internal carotid artery, not occluded, ipsilateral to the January 20, 2026 hemispheric TIA.

Electronically signed: radiology, Bayshore Imaging — February 3, 2026

8. Planned procedure

Planned procedure	Transcatheter stent, right cervical internal carotid artery, with distal embolic protection
--------------------------	---

CPT	37215 — cervical carotid stent with distal embolic protection
Protection device	Distal embolic protection filter is part of the operative plan
Laterality	Right cervical internal carotid artery
Not ordered	CPT 37216 is not ordered. Endarterectomy is not ordered.
Surgeon	Owen Clarke, MD, FACS
Payer	Palm Mutual of Florida Medicare Advantage
Authorization status	Not submitted. Request dated March 6, 2026.

Clinical indication summary

Right hemispheric TIA on January 20, 2026: left arm weakness and word-finding trouble, resolved, no residual deficit.

CTA February 3, 2026: 82 percent NASCET stenosis of the right cervical internal carotid artery. The artery is not occluded.

Operative plan includes a distal embolic protection filter. CPT 37215.
