PATIENT MEDICAL CHART

CONFIDENTIAL — FOR AUTHORIZED USE ONLY. All names, addresses, member IDs, and clinical facts are fictional and were created for demonstration. This is not a real patient.

1. Patient demographics

Patient name	Ruth Bennett
Date of birth	September 9, 1956
Age at visit	69 years
Sex	Female
MRN	CAR-22880
Address	403 West Platt Street, Tampa, FL 33606
Phone	(813) 555-0152
Emergency contact	Alan Bennett (spouse), (813) 555-0153
Primary care	Dr. Irene Walsh, MD, (813) 555-0199
Preferred language	English

2. Insurance

Primary insurance

Payer	Palm Mutual of Florida, Choice PPO
Member ID	PM9011442
Group	PM-TPA-22
Prior authorization	Required for carotid stent
Auth telephone	1-800-555-0177

Secondary insurance. None on file.

3. Active problem list

ICD-10	Diagnosis	Onset	Status
I65.22	Occlusion and stenosis of left carotid artery	2026	Active
I10	Essential hypertension	2010	Active

4. Current medications

Medication	Dose	Frequency	Indication
Aspirin	81 mg	Daily	Started after the duplex
Rosuvastatin	10 mg	Daily	Lipids

5. Allergies

Allergen	Reaction	Severity
No known drug allergies	Not applicable	Not applicable

6. Visit notes — vascular surgery

Visit date: March 20, 2026 | **Attending:** Owen Clarke, MD, FACS | **Type:** New patient consult

Chief complaint. Left carotid bruit found at a physical. She wants a stent.

History of present illness. Ruth Bennett is a 69-year-old accountant referred for a left carotid bruit. She has never had a TIA, amaurosis fugax, or stroke. She is asymptomatic. She denies weakness, speech change, vision loss, and dizziness. The bruit was heard at a screening physical. She walks two miles a day without limitation. She read that a blockage over 70 percent should be stented and asks for a stent with a protection device. There is no ipsilateral ischemic symptom to record because none has occurred.

Examination.

Blood pressure 134/78 mmHg	Neurologic exam Normal. No deficit.
Symptom history No TIA, no amaurosis fugax, and no stroke, ever.	Neck Left carotid bruit
Function Independent. Walks two miles.	

Assessment and plan.

Asymptomatic left cervical internal carotid stenosis. The absence of TIA, amaurosis, and stroke is documented, not missing.

CTA March 1, 2026: 76 percent NASCET stenosis, not occluded.

She requests a stent anyway. The operative plan, if it were authorized, would use a distal embolic protection filter. Order CPT 37215 for asymptomatic stenosis.

Electronically signed: Owen Clarke, MD, FACS — March 20, 2026 at 1:05 PM

7. Diagnostic reports

Carotid duplex — February 24, 2026

Indication	Bruit on screening physical
Left ICA	Peak systolic velocity consistent with 70 to 79 percent stenosis
Right ICA	Less than 50 percent

Interpretation. Screening duplex suggests 70 to 79 percent left internal carotid stenosis. CTA was recommended to confirm NASCET measurement. No symptoms are listed because the order reads screening bruit.

Electronically signed: Gulfshore Vascular Lab — February 24, 2026

CTA neck — March 1, 2026

Indication	Asymptomatic bruit, confirm stenosis
Measurement	NASCET
Date	March 1, 2026, within six months of the March 20, 2026 request

Interpretation. Left cervical internal carotid artery: 76 percent stenosis by NASCET criteria. The artery is not occluded. The plaque is extracranial. Right internal carotid artery: 40 percent by NASCET. Impression: 76 percent NASCET stenosis of the left cervical internal carotid artery in an asymptomatic patient.

Electronically signed: Bayshore Imaging — March 1, 2026

8. Planned procedure

Planned procedure	Transcatheter stent, left cervical internal carotid artery, with distal embolic protection
CPT	37215 — cervical carotid stent with distal embolic protection

Symptom status	Asymptomatic. No TIA, amaurosis fugax, or stroke.
Laterality	Left cervical internal carotid artery
Surgeon	Owen Clarke, MD, FACS
Payer	Palm Mutual of Florida
Authorization status	Not submitted. Request dated March 20, 2026.

Clinical indication summary

She has never had a TIA, amaurosis fugax, or stroke. She is asymptomatic. This is stated in the March 20, 2026 note.

CTA March 1, 2026: 76 percent NASCET stenosis of the left cervical internal carotid artery, not occluded.

The request still names CPT 37215 with distal embolic protection.
